

Vario WiFi Bathroom fan

Vario WiFi - Bathroom fan with app control

Good ventilation that functions properly is very important in a bathroom, to remove dangerous and harmful steam. In new homes the ventilation is usually efficient, but it is seldom as good in older buildings.

Older houses are refurbished with extra insulation to make them more energy efficient, which is fine, but can have a serious effect on the indoor climate. Do not forget the importance of ventilation.

An effective solution is to install a Vario WiFi in all the wet rooms such as the bathroom, toilet and laundry room.

Vario WiFi lets you adjust the ventilation to the way the bathroom is used.

With the high-capacity, low-noise fan.

Remember to ensure a supply of air to the wet room.

To enable Vario WiFi to function optimally, it is necessary to check the whole system, and that circulation (flow-through) is effective, with air coming into the house from outside through fresh-air valves.

Advantages of a Vario WiFi bathroom fan

- Simple and smart control with an app
- Automatic humidity control
- Very low noise level and high capacity
- Easy to keep clean
- Low energy consumption
- Adapters for either Ø100 mm or Ø125 mm penetrations

Functions

- Continuous basic ventilation and ventilation controlled by requirements
- Automatic or manual humidity control
- 24-Hour mode (continuous basic ventilation)
- Speed regulation
- Timer for run-on time
- Timer for delayed start
- Interval ventilation
- Thermostat
- Do-not-disturb function

Vario WiFi Art.no. 117862

Four operating modes

Standby mode The fan is turned off until the *24-hour mode* is activated using the app, or it receives a signal from the humidity sensor or thermostat, or from an external switch.

24-hour mode The fan runs at a low speed which provides continual basic ventilation. When the humidity sensor, thermostat or the external switch is activated, the fan goes into Silent or Max mode (depending on the user's setting).

Silent mode A silent operational mode which can be activated by an external switch. The speed can be regulated from the app.

Max mode Maximum speed for best possible extraction. Activated as standard by the humidity sensor on the fan when humidity increases or when Boost is activated from the app. The speed can be regulated from the app.

Simple and smart control with a Flexit Vario app

The fan is ready for use, but several functions can easily be adjusted using the integrated WiFi and app for Android/iOS.

The app can be downloaded from App Store or Google Play or via the QR code.
